Application for Residence Permit for Job Seeking

Dear Sir or Madam,

I am writing to apply for a **Residence Permit for Job Seeking** in order to seek qualified employment in Germany. I am currently residing in Germany on a Family Reunion Visa and wish to transition to a residence permit that reflects my professional aspirations. As a computational scientist with a doctoral degree and over five years of professional experience in interdisciplinary research, I am seeking to establish myself permanently in Germany's rapidly growing **Bioinformatics and Biostatistics sector**.

Professional Background and Transition to Bioinformatics

My academic journey began with a Ph.D. in Astrochemistry from Université Paris-Saclay (France), where I developed expertise in complex data analysis and mathematical modeling. Following this, I spent over three years as a Post-doctoral Scientist at the University of Hamburg, applying these skills to Marine Ecosystem Modeling. This position enabled me to work extensively with high-performance computing environments, time-series analysis, and statistical modeling in R and Python.

Recognizing the strong demand for computational skills in the life sciences, I made a deliberate decision to transition into Bioinformatics. To facilitate this, I enrolled in a comprehensive **Further Training program at CQ Beratung + Bildung GmbH** (Berlin), where I am gaining specialised knowledge in sequence analysis,

structural bioinformatics, NGS workflows (Nextflow, Galaxy), and biostatistical methods using R and Bioconductor.

Current Internship in a High-Demand Field

Starting in February 2026, I am undertaking a targeted **Internship in Clinical Biostatistics at HealthTwist GmbH**, supervised by Dr. Andreas Busjahn. This internship focuses on implementing Machine Learning workflows using the Tidymodels framework in R—a skillset that is directly aligned with the needs of Germany’s pharmaceutical and biotechnology industries. For an experienced scientist and a fast learner like myself, Germany offers abundant opportunities for upskilling and contributing to cutting-edge research.

Commitment to Integration and the German Language

I have taken concrete steps to integrate into German society. I hold a **Goethe-Zertifikat B1** and have enrolled in a **B2 course at VHS Centrum West**, beginning on 16 February 2026. I am scheduled to take the **Goethe B2 examination on 27 April 2026**. Furthermore, I have successfully passed the “**Leben in Deutschland**” test, demonstrating my understanding of German civic values and my commitment to becoming an active member of this society.

Purpose of Stay and Career Goals

My primary objective for the residence period is to secure a permanent position as a Bioinformatician or Data Scientist within Germany. I am actively networking with companies in Hamburg’s life science cluster and applying for positions where my unique combination of advanced modeling skills and newly acquired bioinformatics expertise can be of value. Germany’s strong investment in biotechnology and digital health makes it an ideal environment for advancing my career and contributing to the field.

Financial Stability

My living expenses during this job-seeking period are secured through a combination of support from the **Agentur für Arbeit** and **sufficient personal savings** in my bank account. Proof of financial means is attached to this application.

I am confident that my qualifications, my ongoing efforts to integrate, and my specialized skills position me as a strong candidate for employment in Germany. Thank you for considering my application.

Yours faithfully,

Dr. Thejus Mahajan
