PROFILE

- Computational scientist (PhD, Post-doc) with ten years' experience building and validating computational models — in physics, marine ecosystem modelling, bioinformatics and clinical data.
- Currently conducting independent research in **neural network interpretability** (PyTorch, ONNX, transformer models), alongside applied work in clinical data engineering and biostatistics.
- Seeking roles in machine learning, research software engineering or scientific data science. Available immediately; open to relocation within Germany.

PROFESSIONAL EXPERIENCE

Independent Research — Neural Network Interpretability

Self-directed, open source

05/2026 - present

Hamburg, Germany

Mechanistic interpretability of transformer neural networks

- Built an interpretability toolchain for a 15-layer transformer network (Leela Chess Zero): captures the model's internal attention during inference via **PyTorch** forward hooks on **ONNX**-converted weights.
- Diagnosed and corrected two systematic errors in the analysis pipeline that produced plausible but invalid results — neither raised an exception nor failed a test. Published the analysis, including a public correction of my own earlier findings.
- Implemented batched GPU/CPU inference and asynchronous orchestration of the reference engine, making whole-game analysis feasible.
- Full-stack research application (Python/FastAPI, React/TypeScript) with an automated test suite.
- Write-up: *The Mirror in the Machine* (thejusmahajan.github.io)

Clinical Data Engineering — Praxisphase (Weiterbildung ABI-2025-3)

HealthTwiSt GmbH

02/2026 - 04/2026

Berlin, Germany

Production data engineering for a national medical registry (Dr. A. Busjahn)

- Refactored a production R/tidyverse pipeline for the DeGIR registry (143,000+ patient records, ~300 clinics), reducing the codebase by a quarter with byte-identical output verified at every step.
- Replaced 257 hard-coded rules with a configuration-driven design, moving business logic out of code into reviewable data files.
- Packaged reusable components as a documented R library with automated checks; built an interactive dashboard on GDPR-safe synthetic data.
- Found two pre-existing bugs during code review; documented both and preserved existing behaviour rather than silently changing results.

Continuing Education — Bioinformatics and Biostatistics

CQ Beratung + Bildung GmbH

08/2025 - 02/2026

Berlin, Germany

Applied bioinformatics and biostatistics

- Programming (Python, R, BASH), bioinformatics databases and sequence analysis, NGS pipelines (Nextflow, Galaxy).
- Biostatistics in R/Bioconductor: ANOVA, PCA, HCA, multivariate methods.
- Capstone: reproducible Nextflow (DSL2) pipeline for Hepatitis Delta Virus sequence analysis (GitHub).

KEY STRENGTHS

Machine Learning & Interpretability

Attention extraction from transformer networks with PyTorch and ONNX. Rigorous validation of model-analysis pipelines: two silent correctness errors found, fixed and published.

Clinical Data Pipeline Engineering

Production R pipeline for a national quality registry (143K records, ~300 clinics), refactored with byte-level verification. R package and Shiny dashboard development.

Scientific Computing & Reproducible Research

High-performance computing (JAX, HPC clusters, Fortran to Python migration), reproducible pipelines (Nextflow, Conda), large scientific datasets (NetCDF, HDF5).

TECHNICAL SKILLS

Programming

Python (PyTorch, ONNX, JAX, NumPy, Pandas, FastAPI), R (tidyverse, Shiny, tidymodels, Bioconductor), SQL, TypeScript, Fortran, C++, BASH

Machine Learning

Transformers, attention/activation capture (forward hooks), mechanistic interpretability, ONNX→PyTorch conversion, batched GPU inference, policy/value head analysis, tidy-models

Clinical Data & Biostatistics

Medical registry pipelines, GDPR/DSGVO compliance, multivariate analysis, PCA, ANOVA, survival analysis concepts, clinical endpoints

Data Engineering

Pipeline refactoring, config-driven ETL, `identical()` verification, R Shiny dashboards, large datasets (HDF5, NetCDF)

Bioinformatics

NGS analysis, Nextflow (DSL2), sequence analysis, Bioconductor

Tools

Git/GitHub, Linux/Unix, HPC clusters, Conda, LaTeX, Docker concepts

LANGUAGES

English

Fluent (C1)

Guest Scientist

Helmholtz-Zentrum Hereon, Ecosystem Modelling

05/2025 - 10/2025 Geesthacht, Germany

Marine ecosystem modelling; ran parallel to the continuing education programme from 08/2025. Finalised the computational modelling framework and prepared the simulation data for peer-reviewed publication.

Job Search & German Language Course

02/2025 - 04/2025 Hamburg, Germany

Active job search and German language acquisition (Goethe-Zertifikat B1).

Post-doctoral Scientist

Universität Hamburg, Institute for Marine Ecosystem and Fishery Science

08/2021 - 01/2025 Hamburg, Germany

Marine ecosystem modelling

- Parental leave from 01/2024 to 12/2024.
- Developed the "Cyanobacteria Life Cycle" (CLC) model within the ER-GOM framework for climate-warming projections.
- High-performance computing (HPC): Translation of a legacy Fortran model into a high-performance Python engine (Google JAX, TPU/GPU parallelisation). Processing of large NetCDF datasets in a Linux HPC environment.

Career Transition

04/2021 - 07/2021 Hamburg, Germany

Relocation from India to Germany and active job search.

Physics Tutor & Chess Coach — Freelance / Tutorwaves Solutions Inc., Kerala, India · 10/2018 - 03/2021

Doctoral Researcher in Astrochemistry

Université Paris-Saclay

10/2015 - 09/2018 Orsay, France

Atomic collision experiments, data analysis and modelling of results

- Acquisition and processing of terabytes of raw data from tandem particle accelerator experiments; C++ optimisation of noise-suppression and signal-smoothing algorithms.
- Development of a molecular fragmentation model for predicting chemical reactions in space (contribution to the KIDA database).

EDUCATION

Ph.D. in Astrochemistry

Université Paris-Saclay, Institute of Molecular Sciences (ISMO)

10/2015 - 09/2018 Orsay, France

Supervisor: Dr. Karine Béroff. Thesis: *Excitation and fragmentation of C_nN^+ ($n=1-3$) in collisions with He atoms at intermediate velocity.*

M.Sc. in Physics

National Institute of Technology Calicut, India

07/2012 - 12/2014 Calicut, India

First Class with Distinction (CGPA 8.71/10).

Research Project – Theoretical Atomic Physics

IIT Mandi (under Dr. Hari Varma)

02/2015 - 08/2015 Mandi, India

Theoretical atomic physics; partly remote.

B.Sc. in Physics

University of Calicut, India

06/2009 - 04/2012 Thrissur, India

Grade: B+ (CGPA 3.49/4.0).

FURTHER TRAINING

Deployable Data Analysis & AI Pipelines with HPC

Supercomputing-Akademie, HLRS
Universität Stuttgart | 09–10/2026 (place confirmed)

High Performance Computing (HPC)

Jülich Supercomputing Centre (JSC),
Forschungszentrum Jülich

PUBLICATIONS

Five peer-reviewed publications in atomic and molecular physics / astrochemistry (2018–2020), including *Astronomy & Astrophysics* and *Journal of Physics B*.
