

Taxes

You were hired to write a small Python program that calculates the taxes of a country. The program takes the given name, last name and the Income as input. The output should consist of a printout string that follows the following rule: Citizen "given name" "last name" has to pay "X" ducats as tax for this year, where X is the calculated tax. The tax is calculated according to the rules given in the table below.

Income	Tax	Assets	Tax
$I \leq 10000$	40%	$A \leq 100000$	5%
$10000 < I \leq 30000$	55%	$100000 < A \leq 500000$	8%
$30000 < I \leq 70000$	75%	$500000 < A \leq 1000000$	13%
$I > 70000$	82%	$A > 1000000$	21%

In a second step adjust your program so that the taxes are not only calculated according to income but also according to the assets of the citizen. Use the entries in the third and fourth column of the table above for this part.

The president of the country doesn't want to type in the names, income and assets of each citizen separately. Instead he hands you the table below containing all necessary information about the citizens of his country. Adjust your program so that the data inside the table is saved in a nested dictionary and use a loop construct to calculate the taxes for each citizen as well as the overall tax you get from all of them. Please be aware that the president (El Presidente) doesn't need to pay taxes.

First name	Last name	Income	Assets
El	Presidente	100000	8000000
Manuela	Ortiz	5000	25000
Fidel	Castro	250000	5000000
Che	Guevara	2500	1000
R��ul	Castro	750000	2500000
Camilo	Cienfuegos	50000	350000
Huber	Matos	35000	100000
Frank	Pais	25000	250000
Abel	Santamaria	60000	0
Roberto	Rodriguez	75000	659400
Ren�� Ramos	Latour	70000	500000
Humberto	Sori Marin	30000	100000
Eloy	Gutierrez Menoyo	10000	1000000
William Alexander	Morgan	35676	356761
Jose Antonio	Echeverria	58654	678451
Rolando	Cubela Secades	7613	97613

Before you start typing, make sure to write down the steps you need to take to achieve your goal (What variables do you need?, How do you need to structure the if statement?).
