

NCBI Search Topics

Hepatitis C NS5B

1. How many articles were published on PubMed between 2010 and 2020?
2. How many of these articles were about Clinical Trials?
3. How many protein structures were published between 1990 and 2010?
4. How many gene entries are alternatively spliced, Annotated genes, non-coding and protein-coding?
5. How many protein sequences with lengths between 250 and 500 amino acids are in the database?
6. How many nucleotide sequences with 500 up to 5000 base pairs are in the database?
7. Which conserved domains were detected?
8. Who wrote the two newest books that contain this topic?
9. Which version of the RNA-dependent RNA-polymerase protein family model can you find using this topic? What is the Review level of this protein family model?
10. How many articles can you find about the “polyprotein;protein F [Hepatitis C virus genotype 5]” (Gene ID: 11027170)?

Sars-CoV2 Spike

1. How many articles were published in the years 2020, 2021 and 2022 respectively?
2. How many gene entries stem from the organism severe acute respiratory syndrome coronavirus 2?
3. How many different protein chains (Chain A, etc.) of the spike protein can you identify in the first 10 entries of protein?
4. How many X-Ray and NMR structures can you find?
5. How many PubMed Links can you find for the SARS-CoV-2_Spike_S1_RBD domain?
6. How long are the longest and shortest nucleotide sequence? What are the corresponding accession numbers?
7. How many SRA entries stem from the platforms Illumina, Oxford Nanopore and PacBio SMRT respectively?
8. What kind of studies can you find in Popset for this topic?
9. How many clinical trials are marked as completed, terminated or withdrawn respectively?

Hepatitis B

1. In Which year was the first article published? Who was the author and in which Journal was it published?
2. What is the title of the oldest entry in the NLM Catalog?
3. What are the titles of the newest and oldest entries in bookshelf?
4. How many gene entries are alternatively spliced, Annotated genes, non-coding, protein-coding and Pseudogene?
5. How many protein sequences stem from DDBJ, EMBL, GenBank, PDB, PIR, RefSeq, UniProtKB / Swiss-Prot respectively?
6. What datatypes can you find in the results of BioProject?
7. For which molecular types and genetic compartments, that have at least one result, can you filter in Nucleotide?
8. Name 15 animals for which you can find entries in Taxonomy.

Influenza

1. How many books were published in the last 1, 5 and 10 years respectively?
2. How many articles were published between 1802 and 1900?
3. How many genes are from genomic, organelle and plastid sources respectively?
4. What entry types have at least one dataset in GEO Datasets?
5. For which species can you find entries in protein?
6. For which molecule types can you find entries in nucleotide?

Neuronal dystrophy

1. How many Report, Book, Collection, Documentation, Database entries are there in Bookshelf?
2. When and from who was the first article published?
3. How many articles were published between 2000 and 2005?
4. Name the five top organisms for which you can find gene entries.
5. How many protein entries were released between 2000 and 2010? How many of them were also revised in the same span?
6. What kind of molecular consequences can you filter for in ClinVar?
7. How old and from which country was the proband for the Biosample entry?
8. What kind of Project data can you find in BioProject?

WNT pathway

1. In which year was the oldest book published?
2. How many articles were published between 1990 and 2000?
3. Who are the authors of the oldest article?
4. How many articles belong to the following categories Books and Documents, Clinical Trial, Meta-Analysis, Randomized Controlled Trial, Review and Systematic Review?
5. How many entries in Gene have the status Current, Discontinued or Replaced respectively?
6. What kind of studies can you find in Popset for this topic?
7. How many protein sequences stem from DDBJ, EMBL, GenBank, PDB, PIR, RefSeq, UniProtKB / Swiss-Prot respectively?
8. What datatypes can you find in the results of BioProject?
9. How many entries in Biosample can you find for the attribute names cell line, cell type, disease, sex or tissue respectively?

Monkeypox

1. From which family stems the monkeypox virus?
2. How many articles were published in 2022?
3. When and by whom were the first and last article in 2022 published?
4. How long are the longest and shortest sequences in Nucleotide?
5. How many entries in SRA are about NDA or RNA respectively?
6. Name 5 Countries in which Clinical Trials are planned or running?

Borna Virus

1. How many books were published in the last 1, 5 and 10 years respectively?
2. How many articles were published between 1960 and 1980?
3. How many articles were published in the last 1, 5 and 10 years respectively?
4. How many entries in Gene stem from CCDS, Ensembl, RefSeq or RefSeqGene respectively?
5. How many protein sequences with lengths between 250 and 500 amino acids are in the database?
6. For which species can you find entries in protein?
7. For which species can you find entries in nucleotide?

Varicella-zoster virus

1. From which family stems this virus?
2. What kind of virus is this?
3. How many entries in nucleotide are about the molecule types genomic DNA/RNA, mRNA, cRNA and transcribed RNA respectively?
4. What Sample types are available in BioSample?
5. What is the taxonomic lineage of this virus?
6. Name one author of a publication from the years 1925, 1950, 1975 and 2000.
7. Name one author for each article type available in the PubMed.

Pyruvate Kinase

1. What is the name, molecular weight and molecular formula for the compound found in PubChem?
2. What kind of molecular consequences can you filter for in ClinVar?
3. How many entries can you find for the types Nucleotide, EST and GSS respectively in Nucleotide?
4. From which organism stem the plastid DNA entries in Nucleotide?
5. For which Scopes can you filter in Bioproject?
6. From which organisms are the first and last entry in Protein (sorted by Release Date), where the source is the PDB?
7. How many entries in Identical Protein Groups stem from the divisions Vertebrates, Invertebrates, Plants and Fungi or Prokaryotes respectively?
8. How many conserved domains are NCBI curated?
9. How many articles were published in the last 1, 5 and 10 years respectively in PubMed Central?
10. How many entries in PubMed allow you access to the full text?

Brain-eating amoeba

1. What is the Latin name of this organism?
2. In which year were the first and last book published?
3. How many articles were published between 1975 and 1995?
4. How many articles belong to the following categories Books and Documents, Clinical Trial, Meta-Analysis, Randomized Controlled Trial, Review and Systematic Review?
5. How many gene entries are alternatively spliced, Annotated genes, non-coding, protein-coding and Pseudogene?
6. How many protein sequences with lengths between 250 and 500 amino acids are in the database?
7. How many nucleotide sequences with more than 500000 base pairs are in the database?
8. How many paired and single libraries can you find in SRA?

Lipoproteins

1. How many clinical Trials are Suspended, Terminated, Completed or Withdrawn?
2. How many DNA or RNA entries are there in SRA?
3. For which species can you find nucleotide sequences?
4. How many entries in BioSample can you find for the attributes cell line, cell type, sex or strain respectively?
5. What datatypes can you find in the results of BioProject?
6. From which is the oldest entry in Protein where the source is DDBJ, EMBL or PDB respectively?
7. For which count bin do find the least amount of identical protein groups?
8. How many entries in Gene have the sequence content CCDS, Ensembl, RefSeq or RefSeqGene respectively?
9. How many articles were published in the last 1, 5 and 10 years respectively in PubMed Central?
10. How many Spanish, Italian and Russian entries can you find in the NLM catalog?
