

Search Topics UniProt

A0A1C7D1B9

1. From which organism is the sequence?
2. Which method was used to generate the structure saved in the RCSB-PDB?
3. What is the name of the repeated domain?
4. What Mass (in Dalton, Da) has the protein?
5. What Ligand does this protein bind?
6. Which version of this sequence is the current one?

P05067

1. From which organism is the sequence?
2. Which Gene is responsible for encoding this protein?
3. How long is this sequence?
4. What metal ions can be bound by this protein?
5. Can this protein be cleaved by Caspases?
6. At which subcellular locations can this protein be found?
7. How long is the transmembrane domain of this protein?
8. Is this protein associated with Parkinson's Disease?
9. Are there Disulfide Bonds in this protein?
10. What kind of modified residues can be found in this protein, e.g. phosphoserine?
11. Name the different Domains that can be found in the protein?
12. How many isoforms can be found for this protein?
13. Are there any sequence conflicts?

P09850

1. Which Gene is responsible for encoding this protein?
2. What is the annotation score of this sequence?
3. In which pathway is this protein involved?
4. Which amino acids form the active site?
5. What is the short name of this protein?
6. What taxonomic identifier has the organism from which this protein stems?
7. Where does the signal peptide end?
8. Does this protein contain more helices or beta strands?
9. What Mass (in Dalton, Da) has the protein?
10. How many publications are associated with this sequence?
11. Which version of this sequence is the current one?

P19843

1. From which organism is the sequence?
2. How many amino acids does this sequence contain?
3. Which cellular component is associated with this sequence?
4. At which subcellular locations can this protein be found?
5. Where does the signal peptide end?
6. What induces the expression of this protein?
7. What proteins could make up the potential complex of this protein?
8. How many repeats of PbH1 can be found in this protein?
9. To which family does this protein belong?

P26663

1. What is the annotation score of this sequence?
2. What Cofactors can be bound by this protein?
3. How many proteins are part of this entry?
4. How many cleavage sites can you find in the sequence?
5. What taxonomic identifier has the organism from which this protein stems?
6. Which mutations can lead to a complete loss of RdRp activity?
7. Name the four proteins that form binary interactions with this protein.
8. Name the domains that can be found in this protein.
9. What motifs can be found in this sequence?
10. What Mass (in Dalton, Da) has the protein?
11. Where can you find compositional bias in this protein?
12. What kind of post-translational modifications can be found in the feature viewer?

P30874

1. From which organism is the sequence?
2. What is the name of this protein?
3. Which Gene is responsible for encoding this protein?
4. At which subcellular locations can this protein be found?
5. How many transmembrane regions does this protein contain?
6. Is this protein glycosylated and lipidated? If yes at which amino acids?
7. Does this protein contain more helices or beta strands?
8. To which family does this protein belong?
9. How many isoforms can be found for this protein?
10. Are there any sequence conflicts?
11. Can you find any antigenic sequences in the Feature viewer?

P41221

1. Is this protein involved in the Wnt signaling process?
2. What taxonomic identifier has the organism from which this protein stems?
3. Is this a secreted protein?
4. With which disease is this protein associated?
5. Which natural variants are known?
6. Are there Disulfide Bonds in this protein?
7. Is this protein glycosylated and lipidated? If yes at which amino acids?
8. How many proteins form binary interactions with this protein?
9. Is there a structure in the RCSB-PDB available for this protein?
10. To which family does this protein belong?
11. What Mass (in Dalton, Da) has the protein?
12. Name the three different parts of this molecule that are responsible for the molecule processing (Feature viewer).
13. Which version of this sequence is the current one?

P42858

1. From which organism is the sequence?
2. What is the annotation score of this sequence?
3. Which Gene is responsible for encoding this protein?
4. How many cleavage sites can you find in the sequence?
5. Which biological process is associated with this protein?
6. What is the recommended name for this protein?
7. With which diseases this protein associated?
8. Which mutations affect the interaction with ZDHHC17?
9. What kind of modified residues can be found in this protein, e.g. phosphoserine?
10. Are there structures in the RCSB-PDB that cover the whole protein? If yes which methods were used to generate them?
11. How often is the HEAT region repeated?
12. How many disordered regions can be found in this protein?
13. Where can you find compositional bias in this protein?

Q9K3C5

1. From which organism is the sequence?
2. How long is this sequence?
3. How many cellular components and biological processes are associated with this protein?
4. What is the short name of this protein?
5. What taxonomic identifier has the organism from which this protein stems?
6. Give the identifier for the structure from the RCSB-PDB.
7. Does this protein contain more helices or beta strands?
8. To which family does this protein belong?
9. What domain can be found in this protein?
10. What Mass (in Dalton, Da) has the protein?
11. How many publications are associated with this sequence?

P27467

1. From which organism is the sequence?
2. Is this protein involved in the MAP signaling process?
3. Which proteins can cleave this protein?
4. What taxonomic identifier has the organism from which this protein stems?
5. Can this protein be found in the cytosol?
6. Which mutations make this protein more resistant against proteolysis?
7. Is this protein glycosylated and lipidated? If yes at which amino acids?
8. Where does the signal peptide end?
9. How many proteins form binary interactions with this protein?
10. How many proteins with 100% sequence identity can you find in the UniProt for this protein?
11. How many Disulfide Bonds can you find the Feature Viewer?

H2QV72

1. How long is this sequence?
2. What is the annotation score of this sequence?
3. How many cellular components and biological processes are associated with this protein?
4. Which Gene is responsible for encoding this protein?
5. Is there a structure form the AlphaFold DB available for this protein?
6. Name the domain which can be found in this protein. Furthermore specify the region it spans.
7. To which family does this protein belong?
8. What Mass (in Dalton, Da) has the protein?
9. Where can you find compositional bias in this protein?
10. How many variants are known for this protein?
11. Which version of this sequence is the current one?

P84227

1. From which organism is the sequence?
2. Is this protein part of the Endosome?
3. What is the main molecular function of this protein?
4. What is the recommended name for this protein?
5. What taxonomic identifier has the organism from which this protein stems?
6. Name all secondary accessions for this protein.
7. Can this protein be found in the endoplasmatic reticulum? If not where can it be found instead?
8. Is this protein highly modified, that means does it contain more than ten modified residues?
9. Where can you find a disordered region in this protein?
10. How many proteins with 100% sequence identity can you find in the UniProt for this protein?
11. How many publications are associated with this sequence?
