Ms. Anna Sacher
Institute of Computational Biology
Helmholtz Munich
Ingolstädter Landstraße 1
85764 Neuherberg

Staff Scientist (f/m/x) in Computational Biology (Job ID: 102868)

Dear Ms. Sacher,

Bridging rigorous physical science computing with modern biomedical workflows has defined my research career. The opportunity to shape scientific strategy and elevate methodological standards at the Computational Health Center aligns perfectly with my drive to engineer reproducible single-cell pipelines. My transition from a Ph.D. in computational systems modeling to bioinformatics pipeline and ML engineering makes me a highly suitable candidate to drive your single-cell and computational biology projects.

I have a proven track record of mentoring and coordinating interdisciplinary teams. Throughout my post-doc and recent roles, I have spearheaded complex research designs while guiding junior colleagues and students in advanced computational techniques. At my current internship with HealthTwist GmbH, I took ownership of code quality for Germany's interventional radiology quality registry. I externalized hardcoded logic, verified byte-level reproducibility, and reduced a 1,834-line production pipeline by 26%—establishing the exact kind of reproducible workflows and shared best practices you require.

Your need for expertise in modern scientific computing frameworks (JAX, PyTorch, scikit-learn) aligns perfectly with my core technical strengths:

- **Scientific Computing & AI:** Built a high-performance Python engine using **Google JAX** with branchless, vectorized operations for TPU/GPU parallelization—the same paradigms underlying **PyTorch**. Actively expanding applied ML with scikit-learn and Tidymodels.
- **Mentorship & Strategy:** Coordinated research initiatives and translated complex quantitative methods for interdisciplinary teams—from coaching state-level teams as an educator to leading systems modeling at Helmholtz Hereon.
- **Reproducible Workflows:** Proficient in containerized pipelines (Nextflow/DSL2) and statistical modeling for high-dimensional biological datasets.

I am deeply motivated by Helmholtz Munich's mission to bridge fundamental methodological development with translational biomedicine. My robust mathematical background and dedication to reproducible engineering will allow me to elevate your lab's computational standards while mentoring the next generation of researchers. I am available from May 2026 and welcome the opportunity to discuss my candidacy in a personal interview.

Sincerely

Dr. Thejus Mahajan
